Wordle Clone

This version of Wordle is hosted on a Docker container. Please see Wordle Clone for further information about the container and how to set up the cloud application on your device. Our version of Wordle is based off of the original NY Times game created by Josh Wardle. Users can guess 5 letter words up to a maximum of 5 times. If a letter does not appear in the word, the box will turn red. If a letter appears in the word but is guessed in the wrong spot, the box will turn yellow. If a letter guessed is in the word and is guessed in the correct box, the box will turn green. Both words found in the Oxford English Dictionary and words that are not in the dictionary are valid guesses. What our game does not do: We do not provide a keyboard showing which letters have already been guessed. This adds an extra layer of challenge to the game. Have fun guessing!
